Sai Satya Jagannadh Doddipatla

Master's in Computer Science @CSUF | Ex-Infoscion | ETL and
Data Pipelines | Software Engineer | Data Engineer | Generative AI
United States

Summary

I have 4+ years of experience in software development and AI solutions, with my most recent role as a Cerebras Fellow. I specialized in AI-driven solutions using Large Language Models (LLMs) and cloud technologies in healthcare. Previously, I worked as a System Engineer at Infosys, focusing on cloud-based development, data engineering, and authentication systems using Azure services.

Professional Focus & Expertise

AI & Machine Learning – Proficient in LLM implementation, leveraging Hugging Face Transformers, LangChain, and Pinecone for AI-driven applications.

Cloud & Data Engineering – Extensive experience with Azure Data Factory, Databricks, Azure ML, and AWS for scalable AI solutions.

Data Processing & Analytics – Expertise in ETL pipelines, Spark, Hadoop, and Snowflake, ensuring efficient data architectures.

AI in Healthcare – Led the AI-driven Healthcare Chatbot project at Cerebras, optimizing real-time medical consultations.

Innovation & Collaboration – Strong problem-solving abilities, working with cross-functional teams to deliver impactful AI solutions.

Looking Ahead

I am pursuing an AI Solutions Architect and Data Engineer career with a long-term vision of leading AI-driven innovations in healthcare and other critical sectors. I aim to harness advanced AI and cloud technologies to develop scalable, data-driven solutions that improve efficiency and accessibility.

Continuous Learning & Growth

I am committed to staying at the forefront of AI and data technologies, focusing on LLM optimization and custom ML model

integration. I hold the Microsoft Certified Azure Data Engineer Associate certification, ensuring cutting-edge expertise.

Beyond Work

Outside my professional pursuits, I am strongly interested in personal finance and stock market analysis, applying data analytics to financial trends. I also enjoy exploring how AI and data science are portrayed in media, often drawing inspiration for real-world applications.

Experience

UBS

Tech Engineer

August 2025 - Present (6 months)

United States

Hays

Site Reliability Engineer

June 2025 - August 2025 (3 months)

United States

Perplexity

Perplexity Business Fellow

March 2025 - June 2025 (4 months)

Cerebras Systems

Cerebras Fellow

November 2024 - March 2025 (5 months)

I developed an AI-driven Healthcare Chatbot System and conducted a performance comparison between GPT-3.5 (via OpenAI APIs) and Cerebras LLMs (LLaMA3.1-8B and LLaMA3.3-70B) running on Cerebras' wafer-scale supercomputing hardware. Cerebras models achieved up to 70% lower inference latency, processing over 20,000 characters per second, quadrupling GPT-3.5's speed. This performance leap is vital for real-time medical consultations. I integrated the models into a full-stack chatbot platform using Flask, LangChain, Pinecone, and Geoapify to support document uploads, symptom queries, and hospital recommendations.

California State University, Fullerton

Student Assistant Housing

May 2024 - December 2024 (8 months)

Fullerton, California, United States

As a Facilities Student Assistant (FSA) in the Housing Department, I supported operational workflows by coordinating maintenance requests, tracking work orders, and communicating task updates to senior staff. While the role involved occasional hands-on assistance, my primary focus was on organization, process optimization, and documentation. This experience sharpened my communication and coordination skills, taught me how to manage real-time issues efficiently, and reinforced my ability to bridge technical knowledge with practical operations.

Extern

AI Risk Analyst

September 2024 - October 2024 (2 months)

California, United States

I gained valuable perspectives on how top global organizations leverage AI to transform decision-making and foster a culture of innovation. Through in-depth research, I explored the strategies of leaders from companies like Safe Superintelligence Inc., Scale AI, Shield AI, and Cerebras Systems, highlighting key lessons:

Data-Driven Leadership: Integrating AI in leadership enhances data-informed decisions, driving efficiency and agility. **Cross-Functional Collaboration:** AI tools break down silos, promoting real-time insights and collaboration across departments. **Ethics and Trust in AI:** Building a robust ethical framework is critical for sustainable AI adoption and maintaining trust with employees and customers.

This externship highlighted the importance of blending innovative technology with responsible practices—a principle that will undoubtedly shape the future of leadership in AI. Huge thanks to NRG for the opportunity and mentorship!

Infosys

1 year 11 months

System Engineer

May 2021 - November 2022 (1 year 7 months)

Hyderabad, Telangana, India

Monitored and resolved issues with Release-Pipelines and Azure Data Factory. Implemented code for the Modern Web Tax Tool and developed an authentication system using Azure Active Directory. Integrated scope scripts for consolidated transaction records and migrated OneNote folders for

improved collaboration. Onboarded Azure Active Directory Caller Services for enhanced security. Conducted experiments with SQL Server Reporting Services and provided support for various system projects.

System Engineer Trainee

January 2021 - April 2021 (4 months)

Work From Home

I have extensive training in Object-Oriented Programming (OOP) concepts, Java, and Microsoft SQL Server for database implementation. Additionally, I've completed comprehensive courses in Basic and Advanced C#, specializing in technologies like Entity Framework Core and ASP.NET Core Web API. Through the Stream Training Program, I gained expertise in cloud-based development. Further, I completed specialized training in ASP.NET Core Web API - Adaptive Edition, Digital Process Automation (DPA), Agile, and DevOps methodologies.

Education

California State University, Fullerton

Master of Science - MS, Computer Science · (January 2023 - December 2024)

SRKR Engineering College

Bachelor's degree, Information Technology · (2016 - 2020)

Aditya Junior College

Intermediate, MPC · (2014 - 2016)

Aditya National Public School - India

SSC · (2013 - 2014)
